## Securing your Business

With our online backup service, your important data is transmitted over the Internet and securely encrypted and stored on a server in our Tier-IV data center. There's no hardware to install or maintain, no wires to connect, no unreliable tapes to deal with.

Your important business data is backed up off-site, away from your business where it's safe from theft, fire, and other disasters man-made or otherwise.

## Not all Online Backup services are created equally!

CTEX uses convenient schedulers, allowing you to schedule backups to automatically occur at a set time or whenever changes are made to already backed up files. Cutting-edge security measures are employed using military-grade encryption, to safeguard your data.

Storage technology is based on EMC enterprise storage solutions using VCE's V-Block unified cloud technology with high end CISCO Blade servers. Our infrastructure is built to support enterprise class requirements with strict demands for recoverability and security. Our RAID/RAIN storage infrastructure provides a 100% uptime SLA, with zero data loss protection once your data is stored in our secured digital vault.

CTEX's state-of-the-art, guarded data centers protect files from

unexpected disasters while theft of backed up data is virtually impossible using our state of the art encryption technology.

## How it works

Depending on the volume of data you will backup, we will work with you on an initial data seeding process. There is the option of using our encrypted storage drives with physical and logical encryption keys. You backup your data at your site, and lock the physical drive with a two part physical key. You bring or ship the drive to our facilities and under supervision, the initial seeding occurs. This is a one-time event.

### **Automatic, continual backup**

Your files are backed up automatically and continually in the background, so your backup stays up-to-date and your employees can stay focused on their jobs.

### **Simple, browser-based admin dashboard**

You'll have complete insight into the backup status of all the computers in your account from an easy-to-use web-based dashboard — allowing you to easily manage the backup of your entire business.

### **Easy Recovery that actually works**

If something happens, CTEX makes it easy to recover files or to roll back to previous versions. CTEX's client recovery system is designed to be easy to use, but if you have any questions our multi-lingual support staff is here to help.

### **Easy to budget**

Data backup is provided in increments of 500MB with no maximum storage limit. You determine how much data you want to backup and hence your storage costs.

## Know where your data lives

CTEX's secured backup vaults are located safely and securely in Curacao. Curacao is part of the Dutch kingdom and is an associate member of the European Union. Your data is protected by strict privatization laws based on European conventions
